EDUCATION

BSc. Computer Science

Mbarara University of Science and Technology

TECHNICAL SKILLS

Languages
Python, Java, SQL

Databases
MySQL, relational database design and queries

Tools
Git and GitHub, Linux command line

Security
Cybersecurity fundamentals, ethical hacking (in progress)

Other
Artificial intelligence fundamentals, signal processing with Fourier series

REFEREES

Available on request.

PROFESSIONAL SUMMARY

Computer Science student at Mbarara University of Science and Technology who builds backend systems and studies ethical hacking to understand how systems fail, so the people who use them stay safe. Writes Python and Java, designs MySQL databases, and has completed two projects and Cisco's Introduction to Cyber Security, with an intermediate Ethical Hacking course in progress. Open to internships, junior roles, mentorship and collaboration.

TECHNICAL PROJECTS

University Quiz Website *Web development · MySQL*

- Built a web platform where university students take quizzes and review their results to support revision.
- Used a MySQL database to store quiz content and student results.
- Published the source code on GitHub (Praise-Assumptah/QUIZ).

Noise Cancellation using Fourier Series *Python · Signal processing*

- Developed a Python application that analyses an audio signal using Fourier series.
- Identified unwanted noise components and removed them to recover a clean signal.
- Published the source code on GitHub (Praise-Assumptah/NOISE-REDUCTION).

CERTIFICATIONS

Introduction to Cyber Security — Cisco Networking Academy **Completed**

Artificial Intelligence **Completed**

Ethical Hacking (Intermediate) **In progress**

STRENGTHS

- Documents my work clearly and collaborates through Git and GitHub.
- Thinks about security from the start of a project, not at the end.
- Learns fast, asks good questions and welcomes feedback.
- Breaks problems into small parts, a habit built through mathematics and debugging.
